Open to roles across Ireland (Dublin, hybrid, onsite or remote) and to relocation | Permanent or contract

Target roles: Data Governance / Data Quality / Data Steward | Data & Reporting Analyst | Operations Analyst | Compliance / GRC Analyst

PROFESSIONAL SUMMARY

Operations analyst with an MSc in Artificial Intelligence and around seven years of operations experience, now focused on building a career in data governance, data quality and data/operations analysis. I combine a formal grounding in data governance, data quality, data stewardship, GDPR and data-integrity concepts (from my MSc) with a practical track record of keeping data accurate, reconciling and validating it against standards, spotting inconsistencies, and following issues across teams through to resolution. I work hands-on in Python, pandas and SQL, produce reporting and analysis, and learn new tools and systems quickly. I currently hold an Irish workplace role while completing my MSc, alongside a machine-learning internship. Have applied for the Stamp 1G graduate permission, which permits full-time work in Ireland for up to 24 months with no employer sponsorship required.

KEY SKILLS

- Data governance & quality: data governance frameworks, data quality, data stewardship, GDPR, data integrity, standards, controls, validation and documentation (foundational, MSc-level).
- Data analysis & reporting: exploratory data analysis, reconciliation, root-cause analysis, trend and exception detection, KPI reporting, dashboards and management information.
- Technical: Python, pandas, NumPy, scikit-learn, Jupyter, Streamlit, Git; SQL and Microsoft Excel (strengthening); Power BI / Tableau (developing); Oracle 23ai (project); TensorFlow / OpenCV (academic).
- Operations: issue triage and ticket handling, cross-team and stakeholder coordination, process documentation and improvement, basic Google Analytics reporting.
- Strengths: attention to inconsistencies and missing information, persistence in chasing issues to resolution, clear communication, and fast, self-directed learning.

WORK EXPERIENCE

Machine Learning Intern - FlyRank AI (Remote)

June 2026 to present

- Developing reproducible, well-documented machine-learning notebooks and Python scripts, with a focus on data quality, documentation and analytical insight.
- Capstone project on semantic modelling and opportunity scoring using real and synthetic datasets.
 - Applying exploratory analysis and NLP techniques to content-optimisation and information-retrieval workflows.

Retail Assistant - SuperValu, Greystones, Ireland

October 2025 to present

- Current Irish workplace role held while completing the MSc, working accurately with product, stock,

pricing and transaction data under daily operational pressure, with close attention to detail.

- Handle customer and operational issues and day-to-day troubleshooting, adapting across store areas.

Operations Analyst - PlayerAuctions, Delhi, India

November 2024 to August 2025

- Maintained and monitored operational data to precise standards, reconciling and validating it against business rules and correcting inconsistencies with the teams who owned the systems.
- Produced regular operational reporting and provided root-cause analysis on recurring data issues, prioritising by impact and following each through to resolution.
- Handled user, account and marketplace cases, and basic Google Analytics reporting.

Operations Analyst - PlayerAuctions, Delhi, India

June 2014 to September 2021

- Managed day-to-day website and platform operations and content, monitoring data and transactions for exceptions and anomalies over a long tenure with the company.
- Coordinated with development, backend and support teams to resolve operational issues and keep the platform accurate and stable, following up to resolution.
- Documented recurring processes and supported process and automation improvements as an operations stakeholder.

EDUCATION

MSc Artificial Intelligence - National College of Ireland, Dublin

Completed; results expected September 2026

- Relevant study: data governance, data quality, data stewardship, GDPR and data-integrity concepts; data analytics, statistics, machine learning and data-driven decision-making.

Bachelor of Computer Applications - Chandigarh University, India

September 2021 to November 2024 | CGPA 7.95

PROJECTS

- MSc Thesis - Trustworthy Deep Learning for Pharmaceutical Manufacturing Quality Prediction: built MT-TrajNet, a multi-task model with evidential regression predicting tablet dissolution, hardness, weight and tensile strength from 10-channel sensor trajectories, with uncertainty quantification, a leave-one-product out-of-distribution test and a live Streamlit demo. Emphasis on data integrity, validation and consistency against defined standards.
- Housing Rent Prediction (Data Analytics) - end-to-end analysis in Python (pandas, scikit-learn) on 300,000+ records with data cleaning, feature engineering, clustering and multiple models (MLP $R^2 = 0.79$).
- AI-Driven Procurement Optimisation (Oracle 23ai) - machine-learning PO-delay prediction, supplier performance analytics and NLP sentiment analysis; reporting and analytics on supplier and PO data.
- Citi Upstart Project (NCI) - selected participant. Additional projects: multi-task learning for UAV imagery (Streamlit app) and reinforcement learning for surge pricing (Q-Learning, PPO).

CERTIFICATIONS

- Google AI Essentials - Coursera (April 2025)

- Introduction to Artificial Intelligence - Great Learning (June 2024)
- Getting Started with ChatGPT-4 - Great Learning (June 2024)
- C++, Java and Python - NSDC Skill India (2014)
